

A CPR Metronome Pen.

The first ball point pen with built-in metronome, flashes at a rate of 100 beats per minute in support of "Just Hands" CPR.

10 minutes is the average time a first responder reaches a victim of a cardiac event. **Correctly applied chest compressions** have been proven to **increase survival rates**. With a bright, white LED flashing at 110 beats per minute we help keep cadence, and as a result help **save more lives**, it's that **simple**.
